(1) Debt Att. To Shareholder: 75% of Project Financing facilities plus other trade facilities (2) Adjusted EBITDA is defined as operating profit before depreciation and amortisation, impairment write-back/expense, net finance costs, income tax and other non-cash items. Adjusted EBITDA is not a uniformly defined measure and other companies in the mining industry may calculate this measure differently. Consequently, the Group's presentation of Adjusted EBITDA may not be readily comparable to other companies' disclosures.

SMELTING – AT THE HEART OF WHAT WE DO

FeSi Production Cost Comparison

- Sustainable producer, first-quartile of cost curve
- 350MW of competitively priced, reliable power, locked in for 20 years
- Hands on management
- Close proximity to the Asian market

Lowest Quartile Producer • Structural Cost Advantage • Sustainable Hydro-power

FERROSILICON MARKET REVIEW

Price surge and normalization with new Chinese power policies

2021

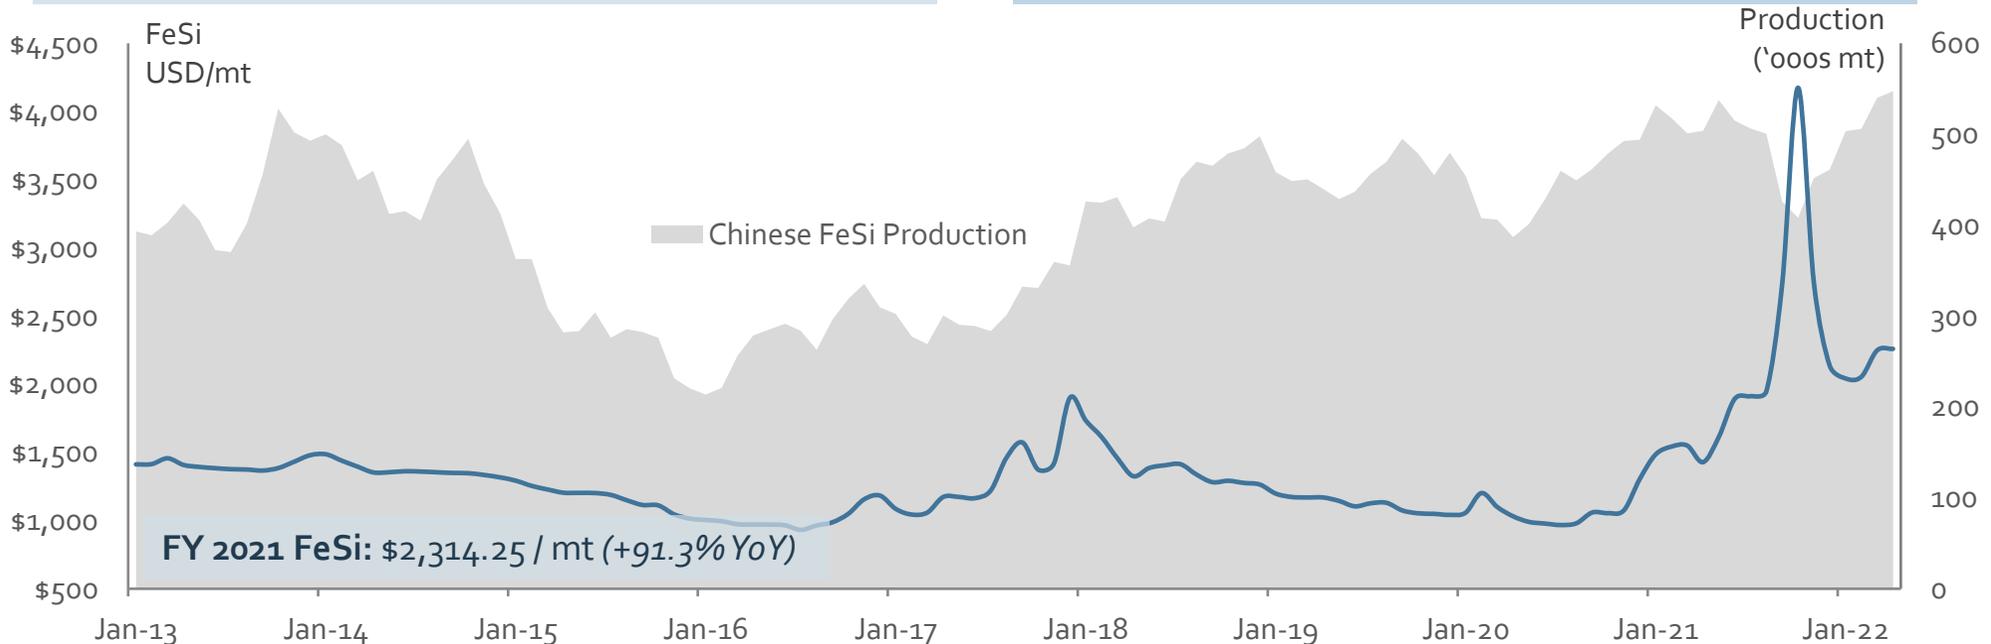

High power prices around the world, notably in China, leads to massive price spike. New power policies in place with fundamental re-pricing of ferrosilicon.

In Jan 22, newly stabilized prices remain above previous historical peak (2018).

2022

Russia was the world's second largest exporter of ferrosilicon in 2021. Given a prolonged conflict, this has lent some support to ferrosilicon prices in Western markets.

Asian prices remain largely determined by Chinese exports, at higher production costs relative to historical.

MANGANESE ORE AND ALLOY MARKET REVIEW

Supply remains uncertain with prices supported at higher level

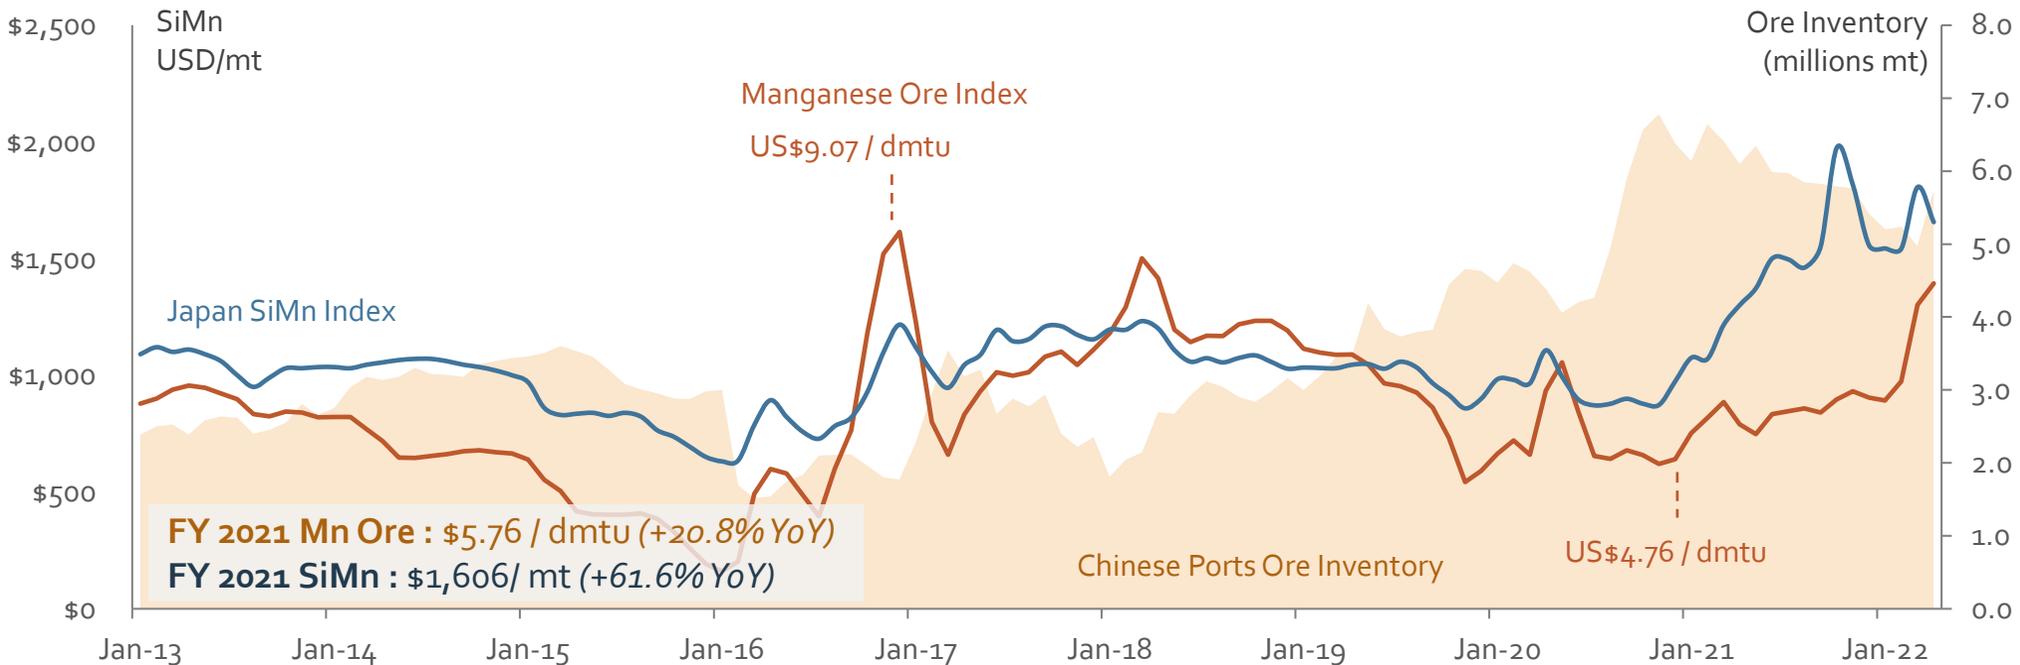

2021

SiMn prices rise significantly faster than Mn ore, traditional correlation breaks down with higher margins. Higher EMM prices encouraging substitution for Refined FeMn, restricting supply of bulk alloys.

In Jan 22, newly stabilized prices remain above previous historical peak (2016).

2022

Ukraine was the world's second largest exporter of Mn alloys in 2021. With the conflict, seaborne exports of alloys ceased, along with production disruptions. Prices rose in response, with the supply gap partially filled by imports from, among other regions, India (the world's largest exporter of Mn alloys in 2021).

 Mn Alloys New 33 MVA <i>200-220 mt / day</i>	-	-	-	2 of 2 <i>150-16oktpa</i>
Total Plant Output (Est.)	47oktpa	36oktpa	34oktpa – 36oktpa	610-64oktpa

- Workforce shortages, mid-year stoppage
- Sustained 12 furnaces into 2022

- Major maintenance for all furnaces
- Planned leave rotations and slower manpower recovery

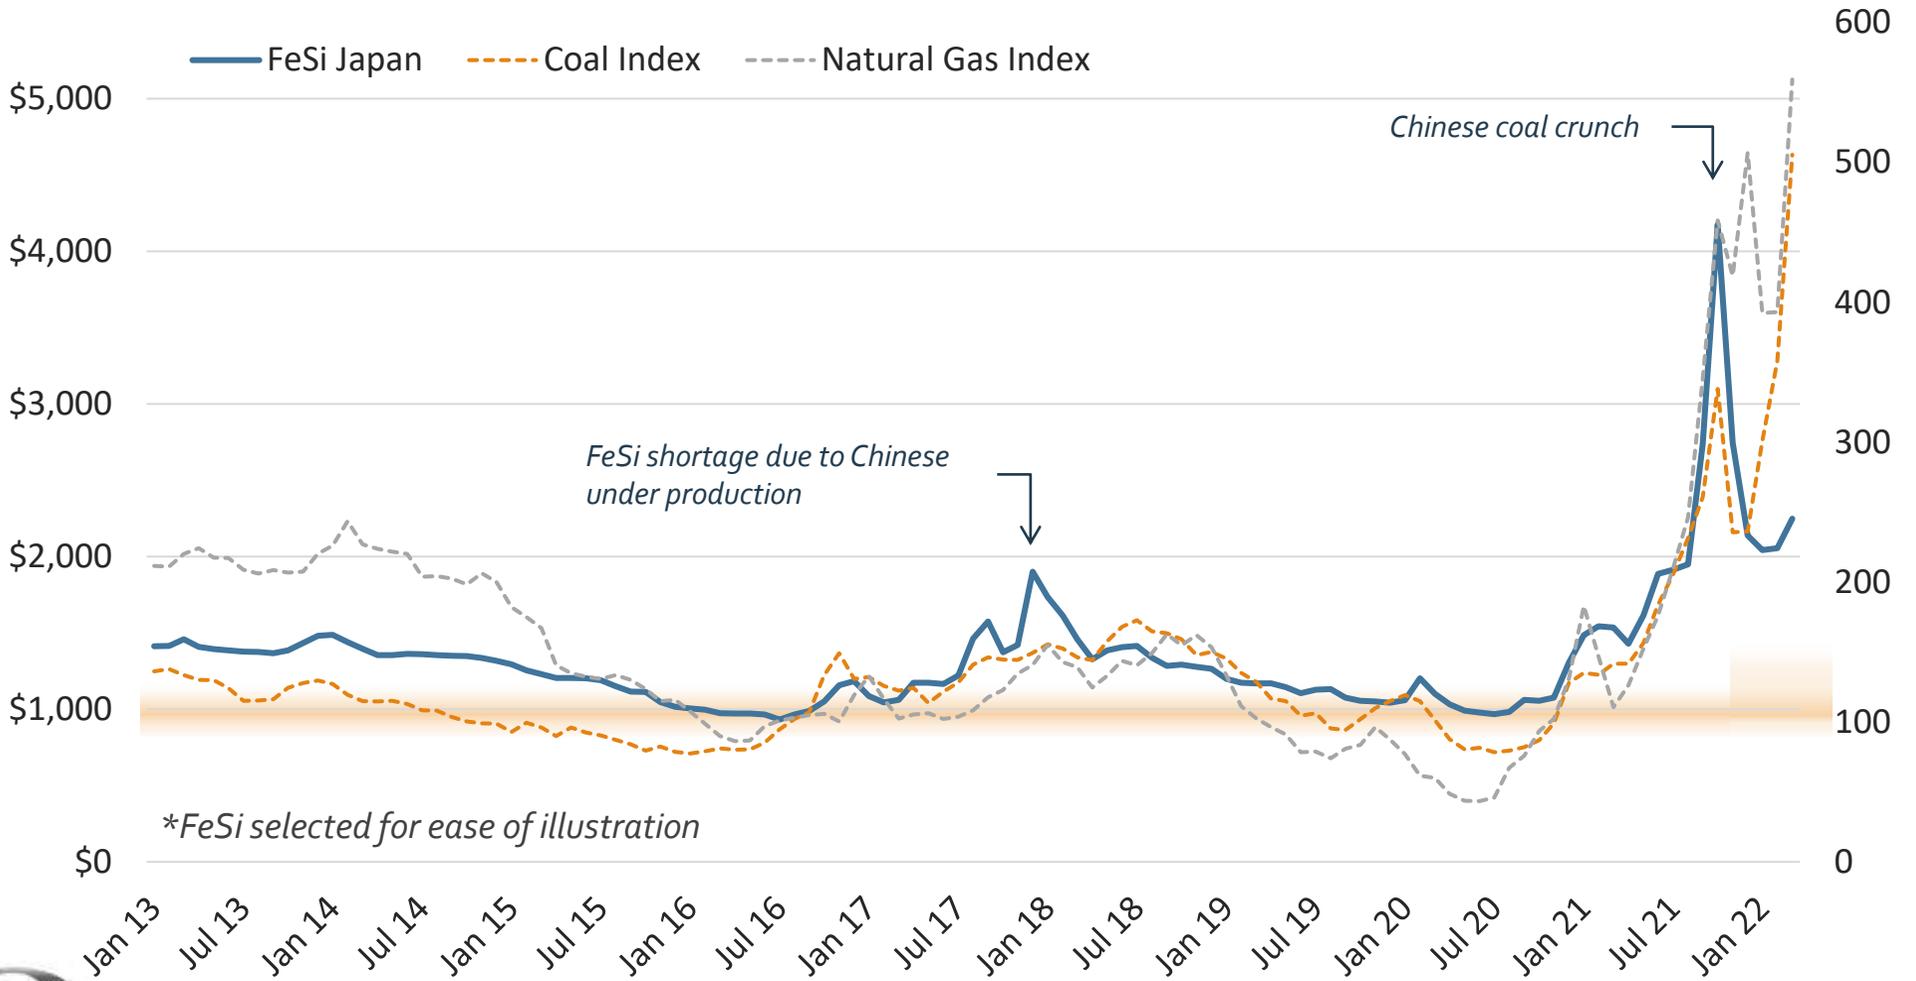

FERROALLOYS CLOSELY TIED TO ENERGY PRICES

Amidst renewables transition and geopolitics, OM Sarawak's costs are well anchored

KEY TAKEAWAYS

OM, now a simpler story

1

Lowest Cost Quartile Ferroalloy Smelter in the Region⁽¹⁾

Backed by low cost environmentally friendly hydro power from a 20-year PPA agreement with Sarawak Energy and a 10-year tax holiday

2

Prime Beneficiary of Rising Power Prices & Transition to Renewables

Rising global power prices and power liberalization policies in China creates a strong price floor for power intensive ferroalloys

Reliable *Long-term Average Margins*

Stable Production + Growth

3

Largest Producer in the Region, with Growth and Diversification Plans

Prioritize diversification to silicon metal targeting renewable energy, additional 150ktpa Mn alloys production capacity

4

Strong Execution & Operating Track Record

>25 years of operational expertise with owner developed assets, since ASX listing in 1998
